

“Great Googly Moogly”

Things you should know about Google

A) **Google Scholar** - Google Scholar provides a simple way to broadly search for scholarly literature. From one place, you can search across many disciplines and sources: peer-reviewed papers, theses, books, abstracts and articles, from academic publishers, professional societies, preprint repositories, universities and other scholarly organizations. Google Scholar helps you identify the most relevant research across the world of scholarly research.

B) **Google Mail** - Gmail is a new kind of webmail, built on the idea that email can be more intuitive, efficient and useful. And maybe even fun. So give it a try—sign up with your mobile phone or ask someone you know with Gmail to invite you.

C) **Google Spreadsheet** - Imagine a spreadsheet that's always current and that others can update from their own computers, even at the same time. Import your existing spreadsheets or create new ones from scratch. All you need is a Web browser - your spreadsheets are stored securely online. Invite people to your spreadsheets and make changes together, at the same time.

D) **Google Talk** - They say talk is cheap. With Google Talk, it's free--and fast. Google Talk offers: get in touch with an IM, email, or a call; enjoy fast file transfer and high quality voice calls; reach all your Gmail contacts, with just a click. Google Talk can now be used on most cell phones.

E) **Google Page Creator** - Google Page Creator is a free online tool that finally makes it easy for anyone to create and publish useful, attractive web pages in just minutes.

F) **Google Earth** - Google Earth combines satellite imagery, maps and the power of Google Search to put the world's geographic information at your fingertips. Google Earth puts a planet's worth of imagery and other geographic information right on your desktop. View exotic locales like Maui and Paris as well as points of interest such as local restaurants, hospitals, schools, and more.

G) **Google Sketchup** - Google SketchUp (free) is an easy-to-learn 3D modeling program that enables you to explore the world in 3D. With just a few simple tools, you can create 3D models of houses, sheds, decks, home additions, woodworking projects - even space ships. And once you've built your models, you can place them in Google Earth, post them to the 3D Warehouse, or print hard copies.

H) **Google Picasa** - Picasa is software that helps you instantly find, edit and share all the pictures on your PC. Every time you open Picasa, it automatically locates all your pictures (even ones you forgot you had) and sorts them into visual albums organized by date with folder names you will recognize. You can drag and drop to arrange your albums and make labels to create new groups. Picasa makes sure your pictures are always organized. Picasa also makes advanced editing simple by putting one-click fixes and powerful effects at your fingertips. And Picasa makes it a snap to share your pictures – you can email, print photos at home, make gift CDs, instantly share via Hello™, and even post pictures on your own blog.
